

PARAGUAY

ABOUT PARAGUAY VACCINATIONS

Paraguay is a landlocked South American nation. Paraguay's climate is variable, unpredictable and subtropical. The long, hot summer lasts from October through March, with January's average maximum temperature being 33°C. Winter extends from June through August.

OVERALL RISK

Medium Risk - Preventable disease occur sporadically or at moderate levels. Consult a Travelvax clinic for your specific risk if travelling outside resorts, 5 star accommodation or for periods longer than a few days.

MALARIA RISK

No risk to travellers.

VACCINE PREVENTABLE DISEASES

YELLOW FEVER

Disease is present. Country requirement at entry: proof of vaccination against yellow fever is required for travellers aged 1 year or over arriving from Brazil, Bolivia, Peru, and Venezuela, and for travellers having transited for more than 24 hours in those countries.

Ī

Vaccination is recommended for all travellers aged 9 months or over, except as mentioned below.

Generally not recommended(1) for travellers whose itineraries are limited to the city of Asuncion.

(1) Yellow fever vaccination is generally not recommended in areas where there is low potential for exposure to yellow fever virus. However, vaccination might be considered for a small subset of travellers to these areas, who are at increased risk of exposure to yellow fever virus (e.g. prolonged travel, extensive exposure to mosquitoes, inability to avoid mosquito bites). When considering vaccination, any traveller must take into account the risk of being infected with yellow fever virus, country entry requirements, as well as individual risk factors (e.g. age, immune status) for serious vaccine-associated adverse events.

Travellers arriving in Australia within 6 days of leaving this country require proof of vaccination.

Travelvax Note: We recommended that this advice is discussed with a Yellow fever licenced practitioner.

COVID-19

For the most up to date requirements for entry into Australia, go to Smartraveller.

Please click this COVID-19 Travel Regulations Map (IATA) to view the latest Paraguay COVID travel requirements.

HEPATITIS A

Moderate risk to travellers, vaccination recommended.

HEPATITIS B

Moderate presence of Hepatitis B in local population. Vaccination would be recommended.

TYPHOID

Moderate risk for most travellers. Vaccination recommended for travel to smaller cities, villages and rural areas outside usual tourist routes. Some medical conditions pre-dispose to infection; whether vaccinations would be recommended should be discussed with a medical practitioner. Consult a medical practitioner for your specific risk.

INFLUENZA

Southern hemisphere winter risk (May to October). Most common vaccine preventable illness in travellers. Vaccine recommended, effective for 1 year.

RABIES

Disease present. Recommendation for vaccination will depend on specific itinerary and activities planned. Generally rabies vaccination is advised for high risk individuals such as veterinarians or animal handlers, cavers. Additionally for higher risk travellers who plan: extended periods outdoors, rural travel, adventurous activities including bicycling; also expats or long-term travellers to endemic regions and children (risk of more severe or risk-prone bites and may not report contact at all).

IAPANESE ENCEPHALITIS

No risk to travellers.

POLIO

No risk to travellers.

TICKBORNE ENCEPHALITIS

No risk to travellers.

MENINGOCOCCAL MENINGITIS

Low risk to travellers.

CHOLERA

No risk to travellers.

OTHER DISEASES

TRAVELLERS DIARRHOEA

High risk. Travellers' Diarrhoea affects 20-60% of overseas travellers, food and water precautions are essential. Self-treatment medications may be recommended.

INSECT-BORNE DISEASES

Diseases such as <u>Dengue</u>, <u>Chikungunya</u>, <u>Zika</u> may be present. Seasonal risk will vary by country. Whether preventive measures will be recommended will depend on itinerary, length of stay, type of travel etc. and needs to be discussed with a medical practitioner. For those countries with disease present, risk is highest in urban and semi-urban areas, but may

also occur in rural areas; <u>insect avoidance measures</u> are highly recommended all year round. Travelvax believes that the best defence is to understand their habits, dress properly and use an <u>effective insect repellent</u> in the correct manner. Consult a medical practitioner for your specific risk.

SCHISTOSOMIASIS

No risk to travellers.

STIS

Low incidence of sexually transmitted and blood-borne diseases. Safe sex and needle precautions should be followed by all travellers.

ALTITUDE

No risk to travellers.

ADDITIONAL INFORMATION

PERSONAL SAFETY

In order to check before and during travel for any high-risk areas visit the Smartraveller website. Avoid unnecessary displays of wealth or valuables and minimise the amounts of cash carried. Keep secure records of passport/credit card/licence numbers. For more safety tips visit: www.smartraveller.gov.au.

MEDICAL CARE

Comprehensive medical facilities available only in the major population centres and/or specific private clinics. Sterile surgical products (syringes/needles/sutures) are not always available. Check for any contacts supplied by your emergency assistance organisation (nominated by your travel insurer) or with IAMAT (International Association of Medical Assistance for Travellers).

FIRST AID KITS & ACCESSORIES

Always carry an <u>advanced first aid kit</u>, including needles and syringes (shortages of sterile equipment are common). A prescription kit (containing treatments for travellers' diarrhoea) is essential. A <u>mosquito net</u> and <u>insect repellent</u> (containing DEET, Citriodiol or Picaridin) are highly recommended, even if anti-malarials are taken.

More information on Paraguay is available during your pre-travel consultation with Travelvax. Call 1300 360 164 for the location of the clinic nearest to you.
